

Your plan data and participant privacy are secure

From the CEO to the frontline associate at Nationwide, the administrator of your PERA Smart Save Deferred Compensation Plan, data privacy and security get top priority. To protect your plan and personal information from unauthorized access and use, Nationwide:

- Uses security measures that include computer safeguards, and secured files and buildings
- Limits access to plan and personal information to those who need it to do their job
- Has taken significant measures to physically secure their network

Top security:

To ensure your PERA Smart Save Deferred Compensation Plan data is always available and secure, Nationwide is the **only provider** that has **two Tier IV data** centers — the **highest-rating** a data center can earn. Their Tier IV data centers feature distribution paths that are physically isolated from one another, greatly reducing the likelihood that a single event could take the whole system down.

Each Nationwide data center provides 99.9995% uptime per year and 96-hour power outage protection. This ensures your PERA Smart Save Deferred Compensation Plan data is available 24 hours per day, 7 days a week and 365 days a year.

The New Mexico PERA Deferred Compensation Plan is administered by Nationwide.
